

## **Pacific Hydro Environmental Policy**

Vision – “Powering a Cleaner World”

At Pacific Hydro, our mission is to produce electricity through the innovative commercialisation of renewable energy resources.

We aim to provide leadership in managing the impacts of our activities and will continually strive to set an example of best practice environmental management based on sustainable development principles.

To demonstrate our commitment to the environment, we will:

- Identify all environmental impacts of our operations through regular review and auditing.
- Respond promptly and effectively to any known significant environmental impacts caused by operations under our control.
- Continue to use and develop our Environmental Management System which provides the framework for setting and reviewing environmental objectives and targets.
- Set and achieve targets that include reducing and preventing pollution.
- Continue to generate electricity with zero greenhouse gas emissions to complement our pollution-prevention ethic.
- Manage land under our care with sensitivity, having due regard for local environmental sensitivities.
- Strive for continual improvement in our environmental performance.
- Comply with all relevant environmental legislation and other requirements which relate to its environmental aspects.
- Educate and train employees and contractors to conduct their activities in an environmentally responsible manner.
- Ensure that this policy is communicated to all persons working for or on behalf of the organisation and is readily available to the public.
